

Lock Box Operation

1. Find Lock box and face it.
2. Slide down the lower large slide button (clear) in center of key box.
3. Locate and Push the CODE numbers on either side of the key box face. Code will be provided via e-mail once funds have been received.
4. Pull down on the top tab button (open) and key face will open up in your hand.

NOTE: Key Face is heavier than it appears. If your grip slips, the box will reset itself in the locked position. Enter code again and take face off of box. Inside box, you will see silver lever with word LIFT on it. Put finger tip behind the F and T in LIFT and pull forward and you can remove lock box from gate. Or I can do it later, just do not lose the face and key.
